

FACED STRUCTURES

CIPI, s.r.o. is also active in the segment of glazed structures based on aluminium profiles. These structures belonged and still belong among characteristic elements of buildings. They provide buildings with a look, function, and have been formed in a long history. They reflect the character of time, culture, geographical location, fashion trends and they significantly create an architectural intention. At present, we can offer glazed windows, doors, skylights and glazed facades of timeless interior and exterior design from system suppliers, e.g. WICONA, ALIPLAST, which meet the strictest criteria and applicable standards.

The company portfolio consists of the following:

GLAZED FACADE STRUCTURES

This product group includes all types of facade structures in exterior or interior environment. We supply facade structures including a full range of openable elements offered by system solutions. Concerning aluminium glazed facades we supply types with cover strip, semi-structural and structural facades.

WINDOWS AND DOORS

In this group of products, you can find windows and doors in the exterior or interior with a wide range of opening types offered by renowned system suppliers including sliding and folding systems.

GLAZED SKYLIGHT STRUCTURES

We offer various types of skylight structures: saddle, lean-to, shed and atypical. For these skylights, we can offer roof windows including devices for heat and combustion products removal to our customers.

Ventilated facades

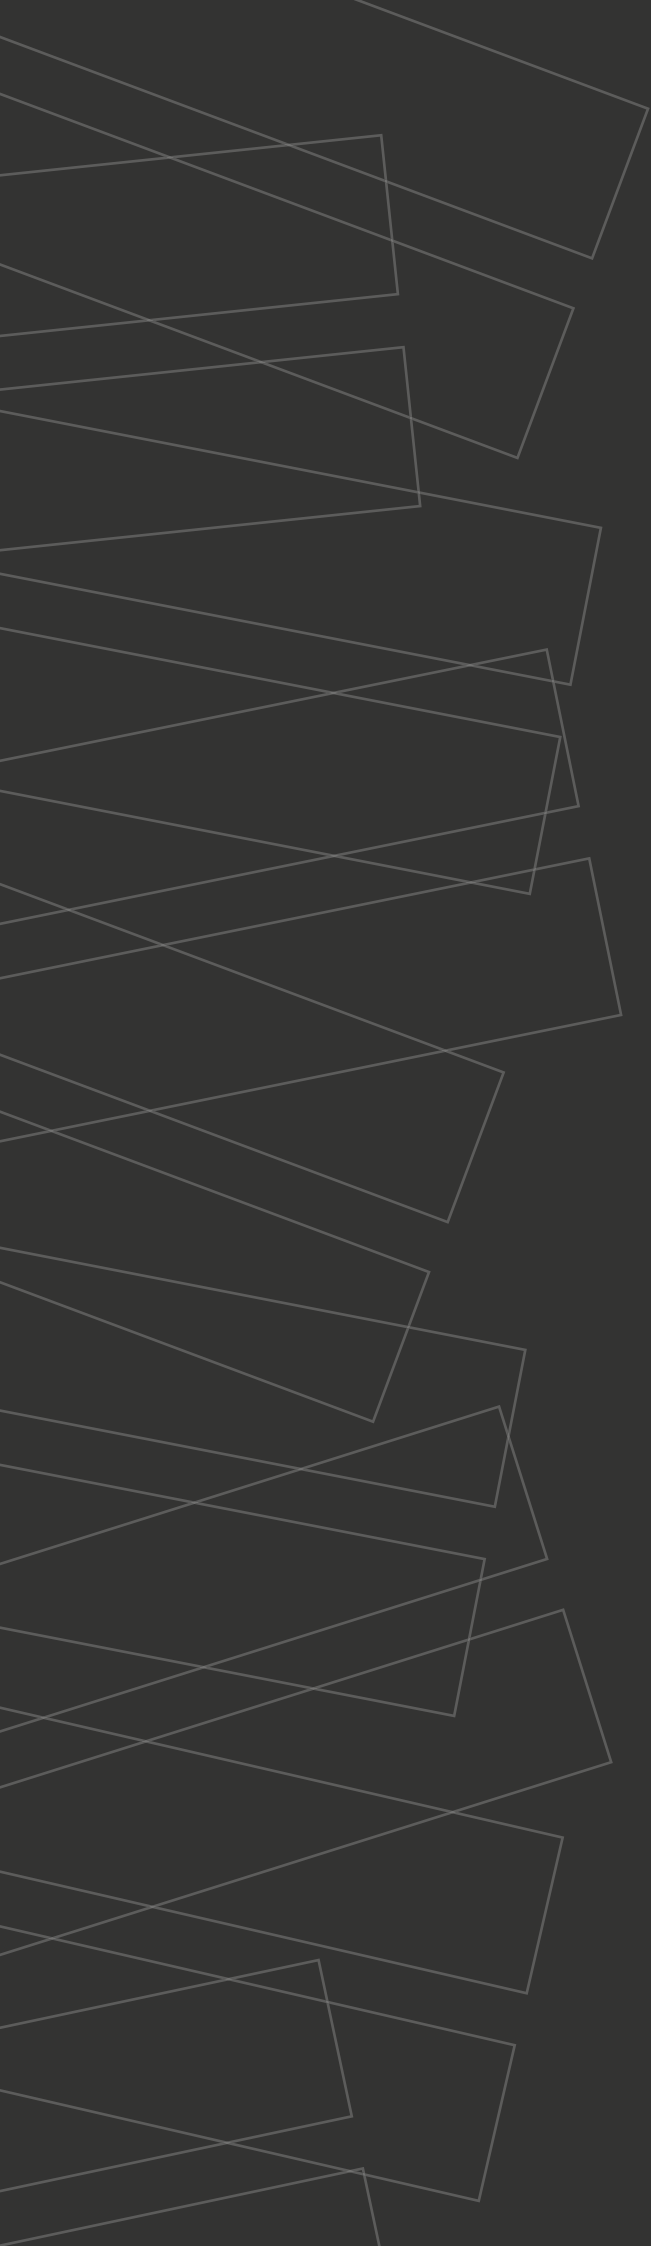

The main specialization is ventilated facades. Besides aesthetics the main advantages include optimum moisture ratio, durability and thermal insulation properties. Thanks to the air gap, air flow and moisture elimination are ensured. In the summer, it prevents overheating because air flow cools the façade shell. In winter, thermal insulation, in conjunction with ventilated air gap, means less energy for heating. By applying suitable lining and substructures, a long service life is guaranteed. Modular lining enables simple service and replacement in case of mechanical damage to the facade.

System types:

- Cassette
- Riveted
- Glued

Materials:

- HPL boards
- Ceramics
- Metal facing
- Glass facing
